General Meeting

Monday, August 18, 2008

Slipstreaming

Join Bob Smerrat, our own Windows guru, as he demonstrates the process of Slipstreaming.

Slipstreaming is a Microsoft feature that allows creating a new CD combining the original operating system disk with the latest SP's or patches. It's merits will be discussed plus a demonstration showing how to create such a disk, along with the needed free programs. An overview handout will also be provided.

Windows SIG Chairman, Bob Smerrat

NOTE: Don't forget the Helping Hands Session. This will be a Q&A session for new users and those with computer problems to get help.

***General Meetings are held at the Kent Recreation Center (7-226 building), room 'D'
If you don't know the combination to get in the door, please ring
the doorbell, which should be available after 5:45PM***
